

UMV CARD ORDER MANAGEMENT PLATFORM

The UMV platform is an online chip card order processing system for card issuers, designed to optimise the ordering and production workflow. By automating key tasks and processes, our system minimises errors, eliminates use of emails, and increases overall efficiency, saving issuer time and resources. It records and tracks data for auditing purposes to facilitate compliance and also allows for convenient and flexible report generation, giving you valuable insights into your order processing needs over time. Ensuring data security and confidentiality, our system features permission-based access controls for customised user roles and permissions for added control and security.

CARD ORDER MANAGEMENT FLOW

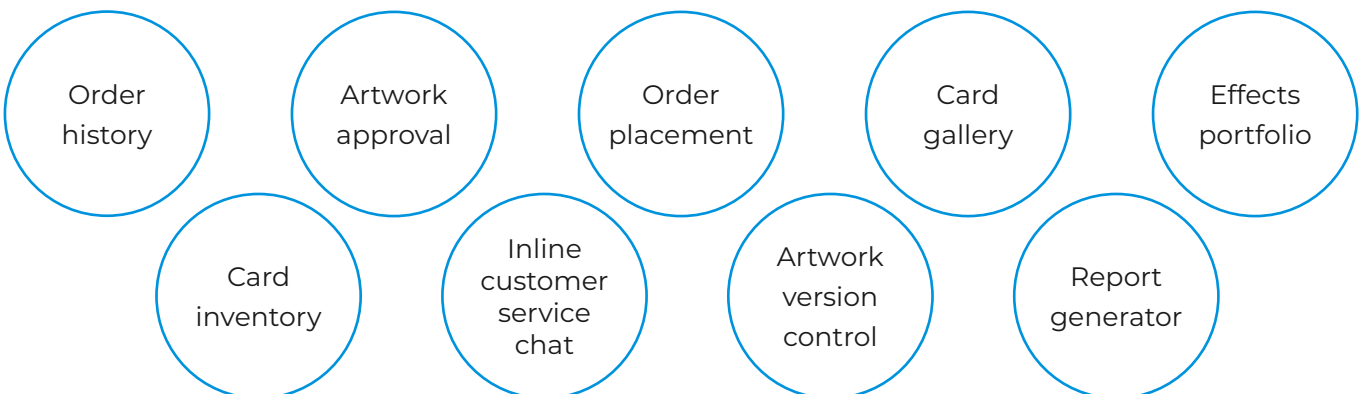

UMV covers all aspects of chip card ordering and production from initial artwork design consultation through to delivery and reporting. An easy to use web-based portal provides at-a-glance view to key information and functions.

UMV PLATFORM FEATURES

A host of different features can be included from an online chat system directly linking our customer services staff for Artwork Version Control to manage multiple concurrent artwork versions, to placing new or repeat orders, checking inventory levels and generating reports.

The UMV platform is designed to optimise the way the card industry manages and produces cards. By digitising each aspect of the chip card production flow and applying automation, the UMV platform is designed to redefine the industry standard for card issuance.

YOMEE MOBILE APPLICATION

YoMee mobile application curates the best credit card deals for consumers in an ecommerce environment. It provides users with the latest financial news, comprehensive bank card comparison, and card customisation linked with self-serviced collection, creating a new acquisition channel to target micro-customer groups for banks and financial institutions.

KEY BENEFITS

- ✓ New acquisition channels for targeted micro-customer groups
- ✓ Exposure to expansive audience of YoMee app users that are credit card users and potential customers of other banking services
- ✓ Endorsed by China's "big 6" banks, 12 joint stock banks, and other regional banks

POWERED BY UMV

YOMEE is a commercial deployment powered by the UMV platform that is pushing the boundaries for financial institutions looking to navigate the B2C fintech waters.

By providing a platform exposed to the tech-savvy, social media tuned segment, it enables issuers to reach their targeted demographic more directly, easily and more effectively than otherwise might have been on their own. Highly customisable, it can be adapted to address any number of different card issuance applications.

About Goldpac

Goldpac provides products and solutions that addresses the financial industry's diverse needs for secure, convenient, and easy-to-use payment solutions. These solutions cover user onboarding, personalization and payment device issuance systems, software, self-service kiosks, and desktop printers.
